

Honeycomb Dehumidifier

SD-40H

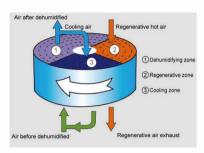

SD-H Series

Coding Principle

Features

- Adopts P.I.D. temperature controller to accurately control regenerative temperature.
- The dehumidifying system of the SD-H series features coolers to ensure a low return air temperature and low dew-point.
- Inbuilt return air filter avoids of honeycomb contamination and ensures long service life.
- Adopt molecular sieve structure honeycomb, which provides low dew-point dry air and is superior to double-barrel dehumidifier that will contaminate raw material due to damaged molecular sieve.

Honeycomb Rotor Working Principle

Touch Control Panel

Application

SD-H honeycomb dehumidifier is mainly used to provide low dew point dry air, which can collocate with hopper dryer to process highly hygroscopic engineering plastics. This series of machines can reach an average dew point temperature of -40°C (The dew-point varies with ambient air and temperature changes) with right setup and maximum drying air volume can reach 4,000m³/hr. If some dry materials are volatile, they must use EOF filter.

Working Principle

System Flow Chart

Options

- Controllable drying heater is optional, add "C" at the end of the model code. (Only Applicable for SD-1000H~4000H, it has to work with the DH-U-PH)
- Inbuilt drying heater is optional, add "PHC" at the end of the model code. (Only applicable for SD-40H~700H)
- Intelligent airflow regulating function is optional, add "SM4", "SM8" at the end of the model code, in which the number behind SM depends on the quantity of collocated Modular Dryer. For example, if the quantity of Dryer is less than 4, select SM4 and so on. A touch panel is indispensible if this function is selected. This optional function should work with MHD-U Modular Hopper Dryer, please refer to the dehumidifying and drying modularization.

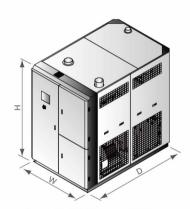

- For models optional with energy-saving drying function, add "ES"at the end of the model code. Standard equipped with touch panel human-machine interface, it can automatically adjust the energy consumption as per material dosage. Collocated with regenerative heat recycler, total power consumption can be saved up to 41%.
- Optional air cooler instead of conventional water cooler method, it is suitable for a cool and dry ambient. Add "A" at the end of the model code.
- Upgraded to PLC & touch panel, add "LC" at the end of the model code.
- The optional built-in dew point monitor is available, which is used to monitor real-time dew point. Add "D" at the end of the model code.

Notes: 1) Plastic materials can be fully dried by drying air with dew-point temperature ≤-20°C. We reserve the right to change specifications 2) "*" Stands for optional drying heater, and add "PH" at the end of the model code.

3) Power: 3Φ, 230/400/460/575VAC, 50/60Hz.
